HYPERBARICS
The power to heal

What Is Hyperbaric Oxygen Therapy?

Hyperbaric Oxygen Therapy (HBOT) is a medical treatment where patients inhale 100% oxygen in a pressurized chamber to heal numerous medical conditions, including radiation damage, problem wounds, head injuries, age-related conditions, and to aid athletic recovery.

**Now Open
Weekends**

How Hyperbarics Heals

Oxygen is a key nutrient required to help your body heal from injury, disease, aging, and inflammation. However, when your cells are damaged, circulation becomes blocked or diminished. This prevents the body from getting the oxygen it needs to heal.

HBOT increases oxygen by over 1,200% in tissues and bones, making it an effective and healing treatment.

Call us today, and together we can evaluate whether hyperbaric oxygen therapy is right for you or your loved one.

Medically Approved

Hyperbaric oxygen therapy is approved to treat numerous conditions by the:

Medicare.gov

And by commercial insurance companies, such as:

BlueCross

KAISER PERMANENTE

blue

And others, to treat numerous conditions.

Benefits of HBOT

Reduces pain
and swelling

Speeds
recovery

Grows new,
healthy tissues

Increases stem
cell mobilization
& reproduction

1,200% increase
in tissue
oxygenation

Improves blood
flow to damaged
areas

How to Get Started

- 1** Give our medical staff a call to discuss whether hyperbarics is right for you.
- 2** You get a prescription from your or our Dr.; we talk with your insurance.
- 3** You start HBOT. Come in, relax and enjoy your hyperbaric treatment.

Treatments last 1.5 hours. You can watch a movie or take a nap in a hyperbaric chamber. Our Certified Hyperbaric Technician is present and available the whole time you are in your chamber.

Preparing For Treatment

You'll want to eat an hour or two before your treatment, because HBOT redirects all of your body's energy to healing. When you arrive at the clinic, you'll change into comfortable pajamas, which we supply, pick out your favorite movie to watch, and relax while you breathe in oxygen and heal for the next 90 minutes.

Hard Chambers Are Best

Only hard chambers can deliver 100% oxygen at pressures between 2.0 and 2.8 ATA. Other clinics might offer to treat you in soft chambers, but soft chambers only deliver 31% oxygen up to 1.4 ATA and are not approved by the FDA or Medicare.

Conditions HBOT Treats

At Bay Area Hyperbarics, we have healed thousands of patients who have experienced medical conditions such as:

- Injuries or tenderness from radiation to the head, neck, bladder, breast and more
- Diabetic wounds to the extremities
- Surgical grafts or flaps that are not healing or may not heal
- Bone infections
- Sudden hearing loss
- Concussion, stroke, and other brain injuries
- Fibromyalgia
- Sports injuries and athletic recovery
- Damage from injury, aging, or disease

Call us to find out if hyperbaric oxygen therapy will work for you or your loved one.

John's Healing Story

John came to us after having been scheduled to have his foot amputated. After 60 hyperbaric treatments with us, he was not only able to keep his foot, but also hike again with his family! John's case is not unique - we have helped thousands like him return to their active lives.
